

Renaming of the RFCs and Modernization

After the creation of the Minneapolis RFC in 1979, the names of the River Forecast Center were changed to reflect the area of responsibility instead of the location of the office. In addition Alaska RFC area of responsibility expanded in 2000 and was renamed to reflect this change. As part of the National Weather Service's modernization and reorganization (MAR) in the 1990s, River Forecast Centers were collocated with a Weather Forecast Office, in some cases this meant a move not only to a new building but a new community as well. The following list shows these changes.

| | | |
|--------------------|---|--|
| Cincinnati RFC | → | Ohio River Forecast Center Wilmington, Ohio |
| Kansas City RFC | → | Missouri Basin River Forecast Center Pleasant Hill, MO |
| Tulsa RFC | → | Arkansas-Red Basin River Forecast Center Tulsa, OK |
